

SMALL COMMERCIAL BUILDING MONITOR-CONTROL SYSTEM

The EcoView™ Commercial is a real-time energy and resource monitoring and control system by Advanced Telemetry. Designed for small commercial buildings, it monitors a location's entire electrical load and extracts the majority of customer savings through the climate control system, the company said. It can also monitor and manage natural gas consumption. Local staff and remote Advanced Telemetry account specialists can view, control, and decrease a facility's energy and resource usage in real time, which can reduce utility bills by as much as 25 percent, said the company. www.advancedtelemetry.com
