Diagnostic Technology

Early Detection Tool

Head Mounted Perimetry (HMP) Visual Field Screener from NovaVision is a portable, wireless, ADA-compliant device that aids in the professional assessment and early detection of glaucoma, amblyopia and visual field deficits. It uses a suprathreshold three-zone strategy to produce a 60° x 44° field (horizontally and vertically, respectively), which generates a report. To obtain a report, patients must place the “goggles” over their eyes and hold a response button. They simply click the button whenever they see the fixation point change or when they see a stimuli appear anywhere in the field while remaining visually fixated on the central point. The device measures the visual field in increments of 4°, which allows physicians to detect disease states early. This diagnostic instrument features an intuitive touch screen user interface, two speed settings and a diamond shaped screening grid.

User-Friendly Tonometer

The Pulsair Desktop tonometer from Keeler features an ultra smooth X/Y mechanism, giving the user control during the alignment process. Its clear user controls and a color video alignment screen with LED illumination are user-friendly and simple to use. Like all Keeler Pulsair tonometers, the Desktop version uses sophisticated optical and sensor technology for positional detection and puff triggering authorization. This tonometer evaluates every reading to ensure the tightest range. When sufficient reliable readings have been taken, a time-saving audible signal alerts the user. The integrated IntelliPuff software analyzes the readings and eliminates any anomalies from the final displayed result. The slim profile of the mainframe allows the clinician to maintain visual

Dry Eye

EyePromise EZ Tears from ZeaVision is the new nutraceutical supplement designed to relieve dry eye symptoms. The EZ Tears formula features more than 1,000mg of EPA/DHA omega-3s, vitamin A (1,000IU), vitamin D₃ (2,000IU), vitamin E (d-alpha tocopherol 60IU), evening primrose oil (100mg), turmeric extract (50mg), green tea extract (50mg) and mixed tocotrienol/mixed tocopherol (20mg).

EZ Tears is the third product in the EyePromise brand family, which also includes EyePromise Restore and EyePromise Zeaxanthin. This formulation was designed in collaboration with eye care practitioners to address systemic and ocular inflammation. A daily dose of EyePromise EZ Tears includes two enteric-coated softgels to reduce after-taste, fish burp and provide enhanced tolerability.
