

## Steel roofing panel is corrugated, saves on energy as well

**A** SC Building Products offers Country Rustic Corrugated as a steel roofing panel with the immediate look of a rusted metal substrate.

Country Rustic is part of the DuraTech Prints color palette, and is the first two-color print

pattern from ASC. Country Rustic provides building owners with the same energy-saving benefits as its current Cool colors line, while adding to the variety of color choices and offering a standard warranty. Country Rustic Corrugated is a 7/8 in. corrugated panel in 26 gauge Zincolume steel, and measures 28 inches wide.

## New BIM standards for fenestration projects

The American Architectural Manufacturers Association has developed a standard for fenestration products within building information modeling programs. The purpose in developing a standard for commercial fenestration products is to better assist users of BIM files in understanding the level of information contained within the manufacturer's model. A standard will benefit the overall industry by standardizing the data contained within the model so that BIM can be implemented across a broad range of products efficiently and effectively. The task group is currently in the process of preparing content for a survey that will be distributed to architects, specifiers and general contractors.

## Roof and wall sheathing builds system to address wet and humid weather

ZIP System roof and wall sheathing, manufactured by Huber Engineered Woods, deliver moisture- and weather-resistant performance required to address wet and humid conditions while meeting performance goals, including structural standards, weatherproofing, and thermal and moisture control. The ZIP System wall sheathing with a built-in protective barrier is a structural wall panel, water-resistive barrier and air barrier all in one, providing a tight building envelope and superior moisture resistance during and after the construction. ZIP System tape provides moisture resistance for seams, valleys and ridges, helps reduce air leaks and is code-recognized as a window and door flashing tape when used with ZIP System Wall sheathing. ZIP System roof panels have a built-in protective moisture barrier and eliminate the need for felt paper and H-clips while preventing expensive rework due to torn felt. Shingles or tiles can be applied directly to the panels, making the system is faster to install.

## Split-ductless energy-efficient systems are quiet

Split-ductless systems permit cooling and heating without requiring window space or costly ductwork additions. Manufactured by Mitsubishi Electric, the extremely quiet and energy efficient systems have three primary components: indoor evaporator, outdoor condensing unit and remote controller. Using inverter compressor technology, the system automatically adjusts to the level needed to maintain a consistently comfortable and draft-free environment. It is ideal for schools, universities, nursing homes, offices, churches, hospitals, restaurants and other sound-sensitive applications.

## Surge protector keeps lines safe, works in tight spaces

Keep those computers, printers and routers powered and protect them from power surges at the same time with the Power Sentry PowerSquid Surge Protector. This

power supply/surge suppressor combo features a creative and super-functional design that works great in tight spaces, easily accommodating bulky adapters, and even includes telephone/DSL line protection. The Power Squid is the solution to accessory adapter and transformer wire management as it allows you to easily use 5 plug-in devices without struggling with powerstrip space requirements. A Contractors Series product is part of the line.

## Choosing surfaces with an iPhone app

DuPont is revolutionizing the way consumers, architects and designers choose their surfaces with mySurface, the first iPhone application of its kind in the surfacing industry. Users can search for DuPont Corian solid surface and DuPont Zodiaq quartz surface colors by hue, providing a color swatch that fills the screen along with information on how to

Available on the App Store

order a sample. Paperless access to all 130 colors of Corian and over 60 colors of Zodiaq helps match countertop colors with K&B designs with an all-in-one tool. DuPont will provide updates and enhanced features to the app on a regular basis to keep the tool at the forefront of technology. At this time, mySurface is available in the United States only.
